

SCANNING[®]

The Journal of Scanning Microscopies

ISSN 0161-0457

Contents • Vol. 26, No. 5, September–October 2004 (Supplement I)

Original Papers

- J-Aggregates on Metal Nanoparticles Characterized through Ultrafast Spectroscopy and Near-Field Optics** I-2
G. P. Wiederrecht, G. A. Wurtz, J. S. Im, J. Hranisavljevic
- Near-Field Spectroscopy of Water-Soluble and Water-Insoluble Porphyrin J-Aggregates** I-10
T. Nagahara, K. Imura, H. Okamoto
- Localization of Surface Plasmon by Using a Metal-Coated Axicon Prism** I-16
Y. Kawata and T. Suzuki
- Discrete Polarization Absorption Property of Carbon Nanotubes Studied by Using Scanning Near-Field Optical Microscope** I-21
W. Zhang, Y. Fu, H. Li, Z. Gu, Z. Zhang, X. Zhu
- Near-Field Optical Technique Applied for Investigation of the Characteristics of Polymer Fiber and Waveguide Structures** I-26
H. Ming, L. Tang, X. Sun, J.-Y. Zhang, P. Wang, Y. Lu, M. Bai, Y. Guo, A. Xie, Z. Zhang
- In-Situ and High-Resolution Optical Observation in Local Anodic Oxidation Process Using a Scanning Near-Field Optical Microscope** I-33
T. Onuki and T. Tokizaki
- Topography-Induced Polarization Anisotropy in Mesoscale Structures** I-38
H.-L. Chou, Y.-C. Chen, P.-K. Wei
- Imaging Near-Field Transverse Modes of Vertical-Cavity Surface-Emitting Lasers by Near-Field Scanning Optical Microscopy** I-43
N. H. Lu, C. Y. Chen, C. S. Lin, W.-C. Liu, D. P. Tsai
- Near-Field Imaging of the Interactions of Evanescent Fields** I-47
C.-S. Lin, C.-F. Yu, H.-W. Liu, N. H. Lu, H.-P. Chiang, D. P. Tsai

Cover micrograph: The scanning electron microscopy image of the honeycomb-like carbon nanotubes (CNTs) arrays synthesized by pyrolysis of nickel-cobalt phthalocyanine method on quartz substrate. The size is 40x30 mm. The CNTs are like spokes lying closely in the honeycombs and are parallel in micrometer scale. From "Discrete Polarization Absorption Property of Carbon Nanotubes Studied by Using Scanning Near-Field Optical Microscope," by W. Zhang, Y. Fu, H. Li, Z. Gu, Z. Zhang, X. Zhu, in this issue on page I-21.

Contents • Vol. 26, No. 5, September–October 2004 (Supplement I)**Original Papers (Continued)**

Probing the Focused Laser Spot of the Apodized Light Source	I-52
Y. H. Fu, W.-C. Liu, D. P. Tsai	
Numerical and Experimental Research of the Near-Field Optical Virtual Probe	I-57
T. Hong, J. Wang, L. Sun, D. Li	
Apertureless Near-Field Scanning Optical Microscope Working with or without Laser Source	I-63
F. Formanek, Y. De Wilde, L. Aigouy, Y. Chen	
Design and Experiments of a Near-Field Optical Disk Head for Very High Efficiency	I-68
K. Goto, T. Kirigaya, Y. Masuda, Y.-J. Kim, Y. Miyamoto, S. Arai	
Simulation and Fabrication of Subwavelength Structures for a Nanometer Feature Enabling Lens-Less Laser Writers	I-73
D. Z. Lin, L. B. Yu, C. K. Lee, C. S. Yeh, C. L. Lin	
Second Harmonic Generation of Biotin and Biotin Ester Microcrystals Trapped in Optical Tweezers with a Mode-Locked Ti: Sapphire Laser	I-78
E. V. Perevendentseva, A. V. Karmenyan, F.-J. Kao, A. Chiou	
Fabrication and Optical Studies of Monolayers Assemblies of Au Nanoparticles	I-83
K. Borgohain, F. H. Ho, H.-M. Chen, R.-S. Liu, S.-F. Hu, D. P. Tsai	
Study of Optical Transmittance of AgO_x Nano Thin Film in Super-Resolution Near-Field Structure	I-90
C. C. Yu, T. S. Kao, W. C. Lin, W. C. Liu, D. P. Tsai	
Evanescence Signal Detection and Enhanced Resolution with Random Silver Nanoparticles	I-94
W.-C. Liu and D. P. Tsai	
Enhanced Resolution of AgO_x-Type Super-RENS Disks with Periodic Silver Nanoclusters	I-98
W.-C. Liu, M.-Y. Ng, D. P. Tsai	
Near- and Far-Field Optical Properties of Embedded Scatters in AgO_x-Type Super-Resolution Near-Field Structures	I-102
T. C. Chu, W.-C. Liu, D. P. Tsai	
Dispersion Relations of Plasmon Wave in Metallic Nanowires	I-106
J.-W. Liaw and J.-K. Wang	
Numerically Investigating Near-Field Scattering for Spatial Enhancement of Single Irregular Nano Plasma Particle	I-109
S. C. Chen and D. P. Tsai	
Localization of Optical Fields Using a Bow-Tie Nanoantenna	I-113
M. W. Chen, F. H. Ho, M.-C. Lin, D. P. Tsai	
Surface Plasmon Polariton in Visible Frequency of a Nano-Slab Consisting of Left-Handed Material	I-118
K. P. Chiu and D. P. Tsai
